Decree 50 WDG
Fungicide

50% Water Dispersible Granule for Control of Botrytis in Various
Greenhouse Crops, Botrytis Diseases in Ornamentals, Forestry Conifers
and Non-Bearing Fruit Trees and Vines and for the Suppression of
Powdery Mildew in Ornamentals.

FOR AGRICULTURAL AND ORNAMENTAL HORTICULTURAL USE ONLY
Not for Residential Use

Active Ingredient
Fenhexamid..............................................................50.0%

Other Ingredients.......................................................30.0%
N-(2,3-dichloro-4-hydroxyphenyl)-1-methyl-cyclohexane carboxamide

Keep Out of Reach of Children

Si usted no entiende la etiqueta, busque a alguien para que se la explique a
usted en detalle. (If you do not understand the label, find someone to explain
it to you in detail.)

Notice: Read the entire label before using. Use only according to label
directions. Before using this product, read Warranty Disclaimer and
Misure states statements in label booklet. If terms are unacceptable, return
at once unopened.

EPA Reg. No. 66330-35-67690
FPL20200325

Manufactured for: SePRO Corporation 11550 North Meridian Street
Suite 600, Carmel, IN 46032 U.S.A.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION. Harmful if swallowed or absorbed through skin. Causes moderate
eye irritation. Avoid contact with skin, eyes and clothing. Wash thoroughly
with soap and water after handling and before eating, drinking, chewing gum,
using tobacco or using the toilet. Remove and wash contaminated clothing
before reuse.

FIRST AID
If swallowed
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

If in eyes
• Hold eye open and rinse slowly and gently with water for 15 - 20 minutes. Remove contact lenses, if present, after
the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If on skin or clothing
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15 - 20 minutes.
• Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control
center or doctor, or going for treatment.

FOR 24-HOUR EMERGENCY MEDICAL ASSISTANCE:
Call INFOTRAC at 1-800-535-5053

FOR 24-HOUR CHEMICAL EMERGENCY:
(Spill, Leaks, Fire, Exposure or Accident)
Call INFOTRAC at 1-800-535-5053

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants;
• Socks and shoes; and
• Chemical-resistant gloves made of any waterproof material.

Follow the manufacturer’s instructions for cleaning/maintaining PPE. If no
such instructions for washables exist, use detergent and hot water. Keep
and wash PPE separately from other laundry.

ENGINEERING CONTROLS
When handlers use closed systems or enclosed cabs in a manner that meets
the requirements listed in the Worker Protection Standard (WPS) for agricultural
pesticides [40 CFR 170.240(d)(4)-(6)], the handler PPE requirements may be
reduced or modified as specified in the WPS.

IMPORTANT: When reduced PPE is worn because a closed system is being
used, handlers must be provided all PPE specified above for “applicators
and other handlers” and have such PPE immediately available for use in an
emergency, such as a spill or equipment breakdown.

USER SAFETY RECOMMENDATIONS
Users should:
• Remove clothing/PPE immediately if pesticide gets inside. Then wash
thoroughly and change into clean clothing.
• Remove PPE immediately after handling this product. Wash the outside
doors of gloves before removing them. As soon as possible, wash thoroughly
and change clothing.

ENVIRONMENTAL HAZARDS
This pesticide is toxic to fish and aquatic invertebrates. Drift and runoff
may be hazardous to aquatic organisms in neighboring areas. Do not apply
directly to water or to areas where surface water is present or to intertidal
areas below the mean high-water mark. Do not contaminate water when
cleaning equipment or disposing of equipment washwaters or rinsates.

DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent
with its labeling.

Do not apply this product in any way that will contact workers or other
persons, either directly or through drift. Only protected handlers may be in
the area during the application. For any requirements specific to your State or
Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker
Protection Standard, 40 CFR part 170. This Standard contains requirements
for the protection of agricultural workers on farms, forests, nurseries and
greenhouses, and handlers of agricultural pesticides. It contains
requirements for training, decontamination, notification and emergency
assistance. It also contains specific instructions on this label about personal
protective equipment (PPE), notification to workers and restricted-entry
interval. The requirements in this box only apply to uses of this product that
are covered by the Worker Protection Standard.

Do not enter or allow entry into treated areas during the restricted
entry interval (REI) of 12 hours.

PPE required for early entry into treated areas that is permitted under the
Worker Protection Standard and that involves contact with anything that has
been treated; such as plants, soil, or water is:
• coveralls,
• socks and shoes; and
• chemical resistant gloves made of waterproof material.

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are NOT
within the scope of the Worker Protection Standard for agricultural
pesticides (40 CFR Part 170). The WPS applies when this product is used to
produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of the treated area until sprays have dried.

Carefully read and understand the Directions for Use and restrictions before
applying this product.

PRODUCT USE INFORMATION
Decree 50 WDG Fungicide is a hydroxanilide protectant fungicide used
for the control of Gray mold (Botrytis cinerea) on various greenhouse vegetables
and for control of Gray mold or Botrytis blights (Botrytis cinerea, Botrytis
elliptica and Botrytis tulipae) on ornamental crops, forestry conifers and
non-bearing fruit trees and vines. When Decree 50 WDG is used to control
Botrytis diseases, suppression of powdery mildew (Uncinia nectar) on
ornamentals crops may be achieved. Decree 50 WDG needs to be
used in a program with other fungicides that are labeled for the control of
powdery mildew. Decree 50 WDG needs to be used in a program with other
products to provide season-long Botrytis protection. Apply as directed
in the APPLICATION section using sufficient water to obtain thorough
coverage of plants. Under severe disease conditions, use maximum rates
and shorter application intervals as specified on the label. Dense foliage
or excessive growth will often prevent adequate coverage; adjust spray volumes
accordingly.
RESISTANCE MANAGEMENT
For resistance management, Decree 50 WDG Fungicide contains a Group 17 fungicide. Any fungal population may contain individuals naturally resistant to Decree 50 WDG Fungicide and other Group 17 fungicides. A gradual or total loss of pest control may occur over time if these fungicides are used repeatedly in the same fields. Appropriate resistance-management strategies should be followed.

To delay fungicide resistance, take one or more of the following steps:
• Rotate the use of Decree 50 WDG Fungicide or other Group 17 fungicides within a growing season sequence with different groups that control the same pathogens.
• Use tank-mixtures with fungicides from a different group that are equally effective on the target pest when such use is permitted. Use at least the minimum application rate as labeled by the manufacturer.
• Adopt an integrated pest management program for fungicide use that includes scouting, uses historical information related to pesticide use, and crop rotation, and which considers host plant resistance, impact of environmental conditions on disease development, disease thresholds, as well as cultural, biological and other chemical control practices.
• Where possible, make use of predictive disease models to effectively time fungicide applications. Note that using predictive models alone is not sufficient to manage resistance.
• Monitor treated fungal populations for resistance development.
• Contact your local extension specialist or certified crop advisor for any additional pesticide resistance management and/or IPM recommendations for specific crops and pathogens.

For further information or to report suspected resistance contact your SePRO sales representative. You can also contact your pesticide distributor or university extension specialist to report resistance.

SPRAY DRIFT ADVISORIES
The applicator is responsible for avoiding off-site spray drift. Be aware of nearby non-target sites and environmental conditions.

Importance of Droplet Size
An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

Controlling Droplet Size – Ground Boom
• Volume - Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
• Pressure - Use the lowest spray pressure recommended for the nozzle to produce the target spray volume and droplet size.
• Spray Nozzle - Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift.

Controlling Droplet Size – Aircraft
• Adjustable Nozzles - Follow nozzle manufacturers recommendations for setting up nozzles. Generally, to reduce fine droplets, nozzles should be oriented parallel with the airflow in flight.

Boom Height – Ground Boom
For ground equipment, the boom should remain level with the crop and have minimal bounce.

Release Height – Aircraft
Higher release heights increase the potential for spray drift.

Shielded Sprayers
Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

Temperature and Humidity
When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

Temperature Inversions
Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally is a concern (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

Wind
Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS. Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

SPRAY DRIFT
Boom-less Ground Applications
Setting nozzles at the lowest effective height will help to reduce the potential for spray drift.

Handheld Technology Applications
Take precautions to minimize spray drift.

COMPATIBILITY OF MIXTURES
This product is believed to be compatible with most commonly used fungicides, insecticides, micronutrients, growth regulators and spray adjuvants. Consult specific product labels for additional information. It is the pesticide user’s responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture. It is always advisable to conduct a tank compatibility test before mixing this product with other products. To determine the physical compatibility of this product with other products, use a test jar. Using a quart jar, add the proportionate amounts of the products to approximately one quart of water with agitation. Add dry formulations first, then flowables, then emulsifiable concentrates last. After thorough mixing, allow this mixture to stand for 5 minutes. If the combination remains mixed or can be readily remixed, it is physically compatible. Once compatibility has been proven, use the same procedure for adding required ingredients to the spray tank. It is suggested that combinations be used on a small number of plants before treating large areas.

PREPARATION OF SPRAY SOLUTION
Read COMPATIBILITY OF MIXTURES section prior to any tank mixing with this product. Begin with clean equipment. Add sufficient clean water to the spray tank for one-half of the mix load. Start tank agitation. Add and properly suspend the necessary amount of product before adding any other products. Agitate to ensure thorough mixing while adding the remaining required water. A high quality wetting agent or other spray adjuvant, approved for use on your crop, may be added to spray solutions according to the manufacturer’s use instructions. Decree 50 WDG needs to be properly suspended and diluted prior to the addition of any adjuvant. When an adjuvant is to be used with this product, SePRO advises the use of a Chemical Producers and Distributors Association (CPDA) certified adjuvant. Consult the adjuvant label or manufacturer for crop tolerance and safety information when used with this product. Maintain agitation during mixing. DO NOT allow the spray mixture to stand without agitation. Apply with properly calibrated spray equipment.

APPLICATION
Prepare only the amount of spray solution needed to treat the area to be sprayed. Maintain agitation during application. Applications should be made immediately after the spray solution is prepared. If there is any delay in application, continue mix agitation. DO NOT allow the spray mixture to stand without agitation. If agitation is stopped for any reason, the spray solution must be thoroughly re-mixed prior to any further use. Rainfall or overhead irrigation within 2 hours of application may necessitate retreatment.

Proper calibration and operation of spray equipment is essential for successful spraying. Consult the spray equipment manufacturer’s operator’s manual, spray nozzle catalogs, and/or your crop advisor for more information.

DO NOT apply this product through any type of irrigation system.

For agricultural applications, apply using ground equipment only (such as boom type, air blast, hand gun or mist blower sprayer). For food crops, thorough coverage of all flowers and fruiting parts is essential for control of blossom and fruit infections caused by Botrytis.

For ornamental crops, thorough coverage is essential for disease control. Apply in sufficient water to obtain complete coverage of flowers, foliage and stems. Applications may be made with high volume, low volume or ultra low volume (non-thermal foggers, misters, etc.) ground equipment only. Follow the spray equipment manufacturer’s directions to determine the amount of spray solution required to obtain thorough coverage. Consult the spray equipment manufacturer’s operator manual, spray nozzle catalogs and/or your crop advisor for more information. DO NOT apply this product using thermal application equipment.

DO NOT plant food crops in the treated field other than those for which the product is labeled within 30 days following the last application.
### Cucumber

### Restrictions
- Not for Residential Use.
- *Not registered for use in California.
- Do not apply in field.
- Single Maximum Use rate is 1.5 lbs of Decree 50 WDG per Acre
- DO NOT apply more than 3-4 crop cycles per year.
- DO NOT apply more than 18.0 lbs (9.0 lbs ai) per acre per year.
- DO NOT apply more than 12 applications per acre per year at the lowest use rate; or more than 8 applications per acre per year at the highest use rate.
- Minimum application interval is 7 days.

### Transplant Production
- *Not registered for use in California.
- DO NOT apply more than 3.0 lbs (1.5 lbs ai) per acre per crop cycle to transplants.
- For transplant production, DO NOT apply more than 3 applications per acre per crop cycle at the lowest use rate or more than 2 applications per acre per crop cycle at the highest use rate.

### Greenhouse Production
- *Not registered for use in California.
- DO NOT apply to transplanted cilantro prior to bloom.
- DO NOT apply more than 3.0 lbs (1.5 lbs ai) per acre per crop cycle.
- For greenhouse production, DO NOT apply more than 3 applications per acre per crop cycle at the lowest use rate; or more than 2 applications per acre per crop cycle at the highest use rate.
- PHI = 3 days.
OUTDOOR-, GREENHOUSE- AND NURSERY-GROWN ORNAMENTALS, FORESTRY CONIFERS AND NON-BEARING FRUIT TREES AND VINES

This product, when applied as a foliar spray, has been shown to effectively protect plants from Botrytis cinerea, Botrytis elliptica and Botrytis tulipae and stop sporulation of the fungus if an infection has occurred. Also, when this product is used to control Botrytis, success of powdery mildew on the treated crop may be achieved. These directions are based upon the results of product testing programs.

This product has been shown to be safe and effective in a limited number of research trials on certain varieties or cultivars of the plant types listed. Users should conduct small scale tests under local growing conditions prior to wide-scale use. Minimum application interval is 7 days.

African Violet
Crabapple, Flowering
Daffodil
Douglas Fir
Fuchsia
Geranium
Gerbera Daisy
Impatiens
Iris
Lily (Asiatic/Oriental)
Lisianthus
Pansy
Petunia
Plum, Flowering
Poinsettia
Rose
Spathiphyllum
Snapdragon
Tulip
Western Hemlock

1 Not for food or feed purposes.
2 Due to the sensitivity of mature Poinsettia bracts and varying local environmental conditions, users must conduct preliminary tests as suggested above.

For small application equipment, the scoop attached to the container is provided for ease in measuring the amount of this product to use per 1 gallon of water. Apply 1 to 2 level scoops per 1 gallon of water. One scoop equals 0.12 ounces or 3.4 grams or approximately one rounded teaspoon of this product.

POST-HARVEST APPLICATIONS

For use on cut flowers, rose budwood, and bare-root nursery stock when applied as a spray. Apply Decree 50 WDG to prevent Botrytis diseases (Gray mold) in cold storage or transit. Apply after harvest and grading prior to cold storage. Apply 1.0 - 1.5 lbs (0.5 – 0.75 lbs ai) of Decree 50 WDG per 100 gallons of spray.

Restrictions

• Do not make more than two consecutive applications of this product. After the second application, use an alternative fungicide effective in controlling Botrytis spp. for two applications before reapplying the active ingredient in this product. Consult your local Horticultural Advisor for the most appropriate alternative products.

• Do not apply more than 1 crop cycle per year.

• Minimum application interval is 7 days.

Ornamentals and Other Nursery Crops Grown Outdoors

• Single Maximum Use Rate is 1.5 lbs Decree 50 WDG in 100 gallons of water

• Minimum application interval is 7 days.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a secure dry place away from excessive heat. Do not store near food or feed. Store in original container only. To close package, replace and tighten cap to form an airtight seal.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility.

Container Handling:

Plastic containers:

Non-refillable container. Do not reuse or refill this container. Offer for recycling, if available, or puncture and dispose of in a sanitary landfill, or (if allowed by State and local authorities) by burning. If burned stay out of smoke. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Warranty Disclaimer: SePRO Corporation warrants that this product conforms to the chemical description on the product label. Testing and research have also determined that this product is reasonably fit for the uses described on the product label. To the extent consistent with applicable law, SePRO Corporation makes no other express or implied warranty of fitness or merchantability nor any other express or implied warranty and any such warranties are expressly disclaimed.

Misuse: Federal law prohibits the use of this product in a manner inconsistent with its label directions. To the extent consistent with applicable law, the buyer assumes responsibility for any adverse consequences if this product is not used according to its label directions. In no case shall SePRO Corporation be liable for any losses or damages resulting from the use, handling or application of this product in a manner inconsistent with its label.
